## I find problems no one has defined yet and turn them into products that deliver business results.

Seven years leading AI products and teams across fintech AutoML, medical AI, commerce AIaaS, and generative AI video. I act as a translator between technology, market, and organization, and I make the case with working demos rather than words. I align product teams with the company's vision and OKRs and stay accountable until the goals are met.

| MRR 10X | Team 0 → 20 | 3 AI patents |
|---|---|---|
| AIaaS business · KRW 5M → 52M in one year | Built the AIaaS product organization | 2 pending · KSC paper · Chroma Awards finalist |

## Experience

### Cinamon · CineV

AI Tech Product Owner, AI LAB

Apr 2025 – Present

Generative AI video · Web platform

- Led the shift of an Unreal-based 3D product to a generative AI web platform. Fed 120+ scene comparisons into product decisions and PRDs, aligned scope and priorities with the CPO and CTO, and launched in July 2026
- Built the LLM-to-Unreal end-to-end integration for a LangChain-based Film Agent, structuring scene context and designing model inputs. Since launch, plan and develop work-level context management
- Prototyped and validated Prompt Enhancer, Voice Adaptor, and Reverse Storyboard hands-on and handed them to engineering for integration. Supported 6 user studies and 2 more model integrations over 5 months via MOAI
- Formed a web-team AI Literacy TF so the team could develop with AI agents and deploy to production on its own, and redesigned the core user flow it was built on. Shipped in two weeks; a production A/B test showed a 2.8x clip-download conversion rate

### BUZZNI · AIaaS

AI Product Manager / AIaaS Product Team Lead

Apr 2023 – Mar 2025

Commerce AIaaS · B2B

- Planned and launched two 0-to-1 services: a long-to-short-form AI video editor and a shopping-assistant chatbot. Signed the editor with CJ OnStyle, SK Stoa, and Shinsegae Live Shopping; grew shopping-assistant accounts into search AIaaS at Shopping NT and recommendation AIaaS at Shinsegae Live Shopping
- Set up the AIaaS product lineup, pricing, contracting, settlement, and operations. Led the product and business operations that grew total business MRR from KRW 5M to KRW 52M in one year
- Acquired 12 new B2B clients. Led technical discussions, PoCs, and contract talks after first meetings; standardized the search API and product/review data specs for live PoCs on clients' app services
- Built and led the AIaaS organization from 0 to 20 people after joining. Managed its OKRs, owned hiring, HR, and evaluations for 4 PMs, and delegated individual engineer management to senior developers

## Experience (continued)

### Dasan E&E

Business Operations Manager
Jun 2022 – Mar 2023
HR consulting · LLM

- Applied LLMs to assessment-center task development in HR consulting, automating a manual workflow. Rebuilt operating processes and the execution system to support the turnaround of the family business

### Lunit · Lunit SCOPE

AI Product Manager
Jan 2022 – Apr 2022
Medical AI

- Planned an early-stage HER2 and ER/PR biomarker analysis product based on medical imaging and wrote its PRD. Supported FDA/CE documentation for existing products

### Solidware (now Ailys)

AI Product Manager, New Business Planning
Dec 2018 – Dec 2021
Fintech AutoML · Japan enterprise

- Owned the fintech AutoML/MLaaS product and its adoption by Japanese enterprises. Handled requirements and training for clients such as Mitsubishi and AEON; planned SSDP, a data-preparation/ETL solution
- Worked with clients and a multinational team mainly in English; ran demos and client meetings at AI Expo Tokyo
- Contributed to winning 13 Japanese enterprise clients and doubling annual revenue. Led government-funded project proposals and business plans, supporting KRW 1.5B in awarded projects

## Skills

| | |
|---|---|
| **Product & business** | Problem definition, product discovery, roadmaps and OKRs, B2B GTM, customer adoption |
| **AI systems** | LLM applications and agents, context engineering, prompt engineering, AI evals |
| **Hands-on** | Prototyping, API and data contract design, model evaluation and product integration |
| **Tools** | SQL · Google Analytics · Datadog RUM · LangChain / LangGraph |
| **Languages** | Korean, Mandarin (native) · English (business professional) · Japanese (business basic) · Russian (elementary) |

## Research, Patents & Activities

| | |
|---|---|
| **Patents** | 3 registered AI patents · 2 pending (video generation, directing-information generation) |
| **Paper** | KSC 2023 oral presentation · ChatGPT-based Korean QA understanding analysis |
| **Competitions** | Meta AI APAC Accelerator 2024 · 3rd place, Seoul regional round · video retrieval<br>Chroma Awards 2025 · fal Sponsor Award Top 11 Finalist · *HappyEnd* |

## Education

**Tsinghua University**

B.A. in Journalism (Media Statistics) · GPA 3.78 / 4.00
Department Best Thesis · 2016
Beijing Scholarship for Outstanding International Students · 2013–2015

**Cinamon · CineV** Apr 2025 – Present

# CineV: from technical validation to product pivot

As generative models advanced, I redefined what the existing 3D product should do and carried technologies and tools I had validated myself into product direction, requirements, and launch.

| Feb 2026 | Mar 16, 2026 | Jul 10, 2026 |
|---|---|---|
| Pivot hypothesis and org alignment | Web product development begins | Web CineV official launch |

| | |
|---|---|
| **Agent & context** | Integrated an end-to-end LLM-to-Unreal flow through a LangChain-based Film Agent. For the pivot, planned to hand rendering to generative models while keeping the existing product's state and scene-context management. |
| **Validation & decisions** | Compared text prompts with 3D conditioning on 120+ script and scene samples, with five reviewers reaching consensus judgments. Co-owned hypotheses, experiment design, and interpretation with the AI development lead, fed results into the PRD, and set scope and priorities with the CPO and CTO. |
| **Technology adoption** | Tracked official model releases, assessed product fit and API readiness, and proposed adoption to the web and AI teams. The teams integrated 30+ models across 7+ areas including R2V, I2V, and TTS. |

### Turning validated tools into product features

| | |
|---|---|
| **Prompt Enhancer** | Shared prompting know-how as an internal Skill, validated it qualitatively, and productized it as an API. It became a shared input feature on the image and video generation screens. |
| **Voice Adaptor / Reverse Storyboard** | Prototyped voice and background-sound separation and video-based storyboard extraction. Handed both to engineering with internal creators' review results, and they shipped in the product. |
| **MOAI** | Built an evaluation console myself and supported 6 studies and 2 additional model integrations over 5 months. Stopped further expansion after the pivot ended Motion use. |

### Standards the team can execute on its own

| | |
|---|---|
| **Education & visioning** | Shared user goals and technical judgment criteria through 13 AI education and visioning sessions. The web team then built features that work across multiple R2V models on its own. |
| **AI Literacy TF** | Formed a web-team AI Literacy TF so the team could develop with AI agents and deploy to production by itself. The core user flow it was built on shipped in two weeks and showed a 2.8x clip-download conversion rate in a production A/B test. |
| **User success metric** | Defined adding a generated clip to the editing timeline as the proxy for First Satisfactory Output (FSO). The A/B test used clip downloads instead, to keep measurement simple. |

**BUZZNI · AIaaS** Apr 2023 – Mar 2025

# 0-to-1 launches and AIaaS commercialization

Planned and launched a long-to-short-form AI video editor and a shopping-assistant chatbot from 0 to 1. Turned client-specific needs into AIaaS that many companies could adopt, and grew it into a business with the 20-person organization I built after joining.

## 0-to-1 launches

| | |
|---|---|
| **Shopping assistant** | Planned a conversational shopping assistant, a service clients were eager to try, as the entry offering. Designed intent-based dialogue scenarios and tied recommend, compare, and purchase CTAs to the conversation context. Operating needs found after adoption led to full contracts for search AIaaS at Shopping NT and recommendation AIaaS at Shinsegae Live Shopping. |
| **Long-to-short-form AI editor** | Turning long-form video into short-form clips took many steps and cost too much to repeat. Combined generation, editing, and distribution into one flow across Home, Studio, Project, and Archive, and standardized KPI measurement points as events based on operating logs. Signed full contracts with CJ OnStyle, SK Stoa, and Shinsegae Live Shopping. |

## Connecting clients through shared services

| | |
|---|---|
| **API & data specs** | Unified client-specific field names and types into shared search functions behind a single endpoint. Asked to extend the product data feed spec to cover reviews and related products, defining the BUZZNI EP concept. |
| **PoC to contract** | Led technical discussions, PoCs, and contracts after first meetings arranged through the CEO’s network. Agreed on failed searches and purchase conversion as success criteria and validated them on clients’ app services. Signed full search contracts with Shopping NT, Home&Shopping, AboutPet, and others. |
| **Pricing & operations** | Designed a structure of setup fees, monthly subscriptions, and revenue share, along with operating standards. Served as the escalation point and wrote incident detection within 1 hour, first response within 3 hours, and a post-resolution report into contracts. |

## Organization

| | |
|---|---|
| **Goals & accountability** | Built the AIaaS organization to 20 people after joining and managed its OKRs. Agreed hiring headcount with the CEO, took part in PM and research hiring, designed the PM hiring assignment and interview process, and owned HR and evaluations for 4 PMs. |
